Pilot training.....Pg 2
Meet The Partners.....Pg 3

Project Progress

Since the last newsletter was published in June 2023, the project was going through the final stages. A Transnational Partners Meeting's was in Slovenia in September. The Drones incubator has been up and running with all the content developed during the project available online. Each partner has also carried out pilot training sessions with relevant stakeholders such as teachers and students. During the months of November and December all partners also held Multiplier Events in which they raised awareness about the Drones project.

The fourth TPM was held between the 19th & 20th of September in Novo Mesto, Slovenia. With regards to project deliverables the main topic of discussion was the Drones incubator and changes that can be made to make the incubator more user friendly. Other changes in the incubator were the way that the results were displayed and accessed by the user. During this meeting project dissemination was also discussed. An important topic during this TPM was the pilot training that was planned for each partner. In this discussion partners shared ideas on how to best set up the pilot training to gather valuable information on the Drones incubator. The partners also discussed the Multiplier Events that are planned towards the end of the year.

Pilot training and Multiplier Events

Each partner carried out pilot training sessions, which were attended by youths, students as well as trainers/teachers. The scope of these training sessions is to introduce the project to the participants and then invite them to use the incubator. After going through all the tools in the incubator the participants then provided feedback on which a set of performance criteria were developed. The performance criteria are used to improve the tool, these include: functionality, user friendliness and usability for adults.

During the months of November and December each partner carried out multiplier events. The aim of these events is to raise awareness about the project and invite the participants to try the tools and resources that were developed during the project. These multiplier events are a great way to promote the project as stakeholders get the chance to ask questions and interact with the project partners.
